

AMENDMENTS TO THE CLAIMS

This Listing of Claims will replace all prior versions, and listings, of claims in the application:

1. (**Currently Amended**) A method on an electronic device for managing application resources on the electronic device, the method comprising:

receiving a command indicating to execute an application on an electronic device;
reading at least one application resource requirement associated with the application; and
determining whether the at least one application resource requirement can be met by the electronic device, wherein the at least one application resource requirement includes at least one of:

average MIPS,
lowest MIPS,
peak MIPS,
screen refresh rate, and
I/O bandwidth,

wherein if the at least one application resource requirement cannot be met by the electronic device:

indicating to a user that the application cannot be executed on the electronic device,

indicating to the user which application resource requirement cannot be met by the electronic device,

indicating to the user how the electronic device can be modified to meet the application resource requirement,

prompting the user for agreement to modify the electronic device,

in response to a command indicating agreement, modifying the electronic device to meet the application resource requirement associated with the application, and

executing the application on the electronic device.

2. (Previously Amended) The method of claim 3, wherein the electronic device is any one of a mobile telephone, a mobile pager, a wireless messaging device, a computer, a personal digital assistant, and a mobile communication system.

3. (Previously Amended) The method of claim 1, wherein the electronic device is a portable device.

4. (**Canceled**)

5. (**Canceled**)

6. (Previously Canceled)

7. (Previously Canceled)

8. (**Canceled**)

9. (**Currently Amended**) A computer readable storage medium including computer instructions on an electronic device for managing application resources on the electronic device, the computer instructions including instructions for:

receiving a command on an electronic device to execute an application;

reading ~~at least one~~ an application priority level application resource requirement associated with the application, in which the application priority level application resource requirement indicates a criticality of the application by monitoring background/foreground mode information for the application; [[and]]

determining whether the ~~at least one~~ application priority level application resource requirement can be met by the electronic device, wherein the ~~at least one~~ application priority level application resource requirement includes at least one of:

average MIPS,

lowest MIPS,

peak MIPS,

screen refresh rate, and

I/O bandwidth; and

switching the running of the application between one of background mode and foreground mode, based upon current application resources.

10. (Previously Amended) The computer readable storage medium of claim 11, wherein the electronic device is any one of a mobile telephone, a mobile pager, a wireless messaging device, and a mobile communication system.

11. (Previously Amended) The computer readable storage medium of claim 9, wherein the electronic device is a portable device.

12. (**Currently Amended**) The computer readable storage medium of claim 9, further comprising instructions for:

wherein if the ~~at least one~~ application priority level application resource requirement can be met by the electronic device, executing the application on the electronic device; and

wherein if the ~~at least one~~ application priority level application resource requirement cannot be met by the electronic device, indicating to the user that the application cannot be executed on the electronic device.

13. (**Canceled**)

14. (Previously Canceled)

15. (Previously Canceled)

16. (**Canceled**)

17. (**Currently Amended**) An electronic device ~~for managing application resources on the electronic device~~, comprising:

a memory including an application residing on the electronic device;

a user interface for receiving a command indicating that a user desires to execute an application;

a file including at least one application resource requirement associated with the application; and

a processor for determining whether the at least one application resource requirement can be met by the electronic device, wherein the at least one application resource requirement includes at least one of:

average MIPS,

lowest MIPS,

peak MIPS,

screen refresh rate, and

I/O bandwidth; and

a display, for indicating to the user that the application cannot be executed on the electronic device, for indicating to the user which application resource requirement cannot be met by the electronic device, for indicating to the user how the electronic device can be modified to meet the application resource requirement, and for prompting the user for agreement to modify the electronic device,

in which the user interface receives a command indicating that the user agrees to a modification of the electronic device to meet the application resource requirement associated with the application, in which the processor modifies the electronic device, and in which, subsequent to modifying the electronic device, the processor executes the application on the electronic device.

18. (Previously Amended) The electronic device of claim 24, wherein the electronic device is any one of a mobile telephone, a mobile pager, a wireless messaging device, and a mobile communication system.

19. (Previously Canceled)

20. (**Canceled**)

21. (**Canceled**)

22. (Previously Canceled)

23. (Previously Canceled)

24. (Previously Added) The electronic device of claim 17, wherein the electronic device is a portable device.
